### PROFILE

My research goal has been to comprehend the whole biology, especially pathophysiology of different diseases in different organs in the light of diversity, dynamism and versatility of lipids and their metabolism hoping to bring a new concept into the central dogma of molecular biology.

Thanks to recent progress in omics and lipidomics, I enjoy the mystery of diversity of fatty acids in the membrane lipids, especially chain length of fatty acids highlighting importance of endogenous lipogenesis together with cholesterol metabolism in the various pathophysiology linking to signaling by nuclear receptors in atherosclerosis.
