

The **A B C**'s of Bempedoic Acid for Cardiovascular Health

A

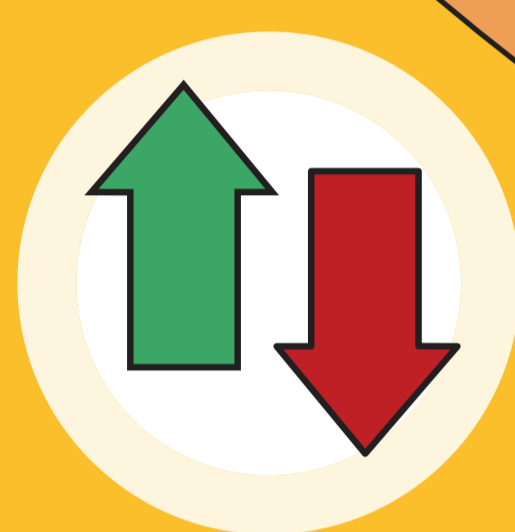

A novel medication,
bempedoic acid:

Acts in the same
**cholesterol
biosynthesis
pathway** as statins

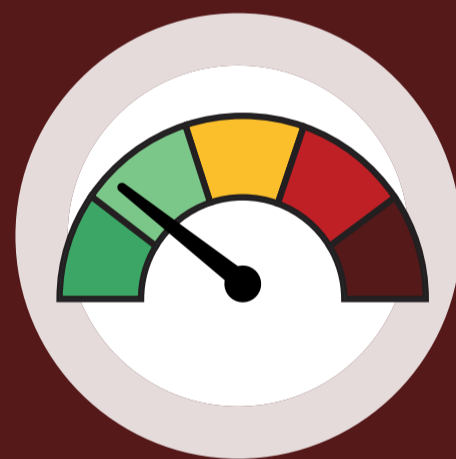

**Targets ATP-Citrate
Lyase**, an enzyme
upstream of
HMG-CoA reductase

**Up-regulates LDL
receptors** and
lowers LDL-C

B

Benefits of bempedoic
acid include:

**Reduced LDL-C
and hsCRP levels**

**Lower risk of major adverse
cardiac events** including
non-fatal stroke, non-fatal
myocardial infarction and
cardiovascular death

C

Challenges posed by
statin non-adherence
and statin intolerance
**can be reduced by using
bempedoic acid in
high-risk patients.**
