**Re: IAS fellowship training conclusion**

Dear IAS fellowship,

I am pleased to confirm that Dr Yasmin Salem has concluded her training with the machine learning/ artificial intelligence team at department of bioinformatics, The University of Texas Southwestern Medical Center, Dallas, TX, USA. During the past 6 months of training, Dr Salem learned how to secure big data and navigate different data set providers for academic research. She learned how to submit proposal and work with the UK-Biobank. She could secure access to the UK-Biobank to acquire the data required for completion of her proposed project. The analysis, interpretation, and publication of the study results can be continued remotely with full support from our side.

Dr Salem has shown exceptional enthusiasm and dedication to her project. I believe her work will be a great foundation for more extensive future research and will have a great impact in the field.

Feel free to reach me for any further questions that you might have.

Best Regards,  
Ahmed M. Shalaby
